

Sales Price Manager

Defining complex price structures made easy

This smart, browser-based app facilitates the definition process of complex price structures and provides an intuitive, comprehensive overview of all product prices.

Workflow support on a large scale

Enable your employees responsible for planning and sales to manage prices for all types of products in a transparent way,

including scales for products. Price scales, periods, and edition prices are supported.

Prices for each customer

Sales Price Manager allows defining customer-specific price lists. The models featured in the app make it possible to determine prices by time period, or by product edition. A full price history is provided.

In combination with the 'Global Sales' license, contractor-specific price models can be defined in a transparent way.

As product prices are always allocated on an ISBN or article number level, the connection to a specific product is always clear.

Allows creating customer-specific price lists
