Royalty Accounting

Comprehensive royalty account information at one glance

Royalty Accounting is a cloud-based STREAM application to join the family of Klopotek's Contract, Rights and Royalties (CR&R) solution. Specially designed to provide comprehensive royalty account information, royalty managers and publishing team members, business analysts and rights accountants can access all relevant information at one glance.

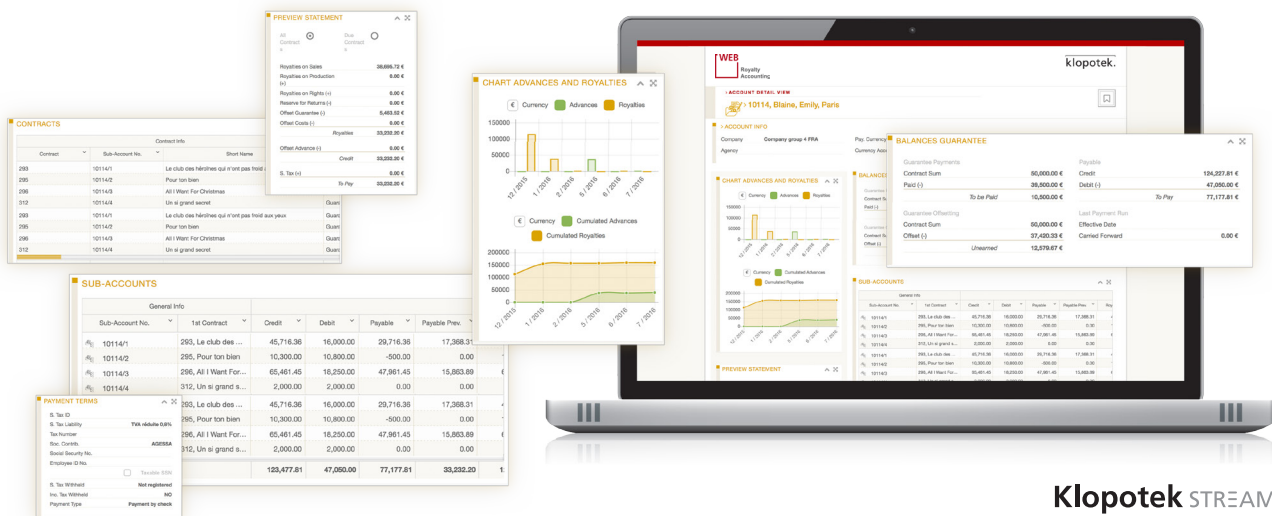

Instant access to archived royalty statements and payment remittances enables users to easily answer author queries. Necessary adjustments and notations to author's accounts can be handled with remarkable ease.

Using Klopotek's rich dashboard functionality, users can customize their own view based on the information most important to them. Data is provided in content chunks (a.k.a. widgets), which allow a more flexible and personalized user experience.

Royalty Accounting can easily be integrated into the existing business process of the Klopotek Classic Line.

KEY USERS

- Royalty managers and team members
- Rights accountants
- Business analysts
- Accounts Payable
